

Invisishield™ Drapes

Unique products to help improve safety and patient care

Overview

Medline's Invisishield specialty drapes are designed to make the clinician's job easier while improving safety for both patients and staff.

INVISISHIELD PATIENT DRAPES

Medline's Invisishield drapes are clear so clinicians can easily see theatre equipment and the incision area. The impervious, tear-resistant material provides exceptional protection and offers superb drapeability.

CLEAR, IMPERVIOUS AND DRAPEABLE

Configurations for all major procedures and applications can be found in each section of our different Invisishield patient drapes.

- Transparent – Clinicians can easily view the area around incision sites.
- Impervious – Made of tear-resistant polyethylene and polyurethane films, Invisishield drapes provide superb protection from fluids.
- Drapeable – Invisishield drapes have just the right amount of flexibility and softness for superb drapeability.

USEFUL FEATURES

Invisishield drapes have handy features that help make the clinician's job easier. Our fluid pouches feature handy tabs on the adhesive liner that make removal easy. Capped, closable ports eliminate the need to cut or pierce the pouch for drainage, improving fluid control and reducing setup times.
